

# phpMyFAQ 1.5

## I have a blank page instead of the FAQ. What happened?

If you see only a blank page instead of your installed version of phpMyFAQ something went totally wrong. To get error messages you have to enable the DEBUG MODE in the file inc/init.php:

```
define('DEBUG', true);
```

After changing this, you should see error messages. If you can't solve them by yourself, just drop us a note at our forums and we'll help you.
